Important safety information

This machine is equipped with safety features. Nevertheless, read and follow the safety instructions carefully and only use the machine as described in these instructions, to avoid accidental injury or damage due to improper use of the machine. Keep this safety booklet for future reference.

Warning

General

- Check if the voltage indicated on the machine corresponds to the local mains voltage before you connect the appliance.
- Connect the machine to an earthed wall socket.
- Do not let the power cord hang over the edge of a table or worktop and do not let it touch hot surfaces.
- To avoid the danger of electric shock, never immerse the machine, mains plug or power cord in water or any other liquid.
- Do not pour liquids on the power cord connector.
- To avoid the danger of burns, keep body parts away from hot water jets produced by the machine.
- Do not touch hot surfaces. Use handles and knobs.
- Switch off the machine with the main switch located on the back (if present) and remove the mains plug from the wall socket:
  - If a malfunction occurs.
  - If you are not going to use the appliance for a long time.
  - Before you clean the machine.
- Pull at the plug, not at the power cord.
- Do not touch the mains plug with wet hands.
- Do not use the machine if the mains plug, the power cord or the machine itself is damaged.
- Do not make any modifications to the machine or its power cord.
- Only have repairs carried out by a service center authorized by Gaggia to avoid a hazard.
- The machine should not be used by children younger than 8 years old.
- This machine can be used by children aged from 8 years and above and by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the machine in a safe way and if they understand the hazards involved.
- Cleaning and user maintenance shall not be made by children unless they are older than 8 and supervised.
- Keep the machine and its cord out of the reach of children aged less than 8 years.
- Children should be supervised to ensure that they do not play with the machine.
- Never insert fingers or other objects into the coffee grinder.
- Be careful when you dispense hot water.
  Dispensing may be preceded by small jets of hot water. Wait until the end of the dispensing cycle before you remove the hot water dispensing spout.
Caution

General

- This machine is intended for normal household use only. It is not intended for use in environments such as staff kitchens of shops, offices, farms or other work environments.
- Always put the machine on a flat and stable surface. Keep it in upright position, also during transport.
- Do not place the machine on a hotplate or directly next to a hot oven, heater or similar source of heat.
- Only put roasted coffee beans in the bean hopper. Putting ground coffee, instant coffee, raw coffee beans or any other substance in the coffee bean hopper may cause damage to the machine.
- Let the machine cool down before you insert or remove any parts. The heating surfaces may retain residual heat after use.
- Never fill the water tank with warm, hot or sparkling water, as this may cause damage to the water tank and the machine.
- Never use souring pads, abrasive cleaning agents or aggressive liquids such as petrol or acetone to clean the machine. Simply use a soft cloth dampened with water.
- Descale your machine regularly. The machine indicates when descaling is needed. Not doing this will make your appliance stop working properly. In this case repair is not covered by your warranty.
- Do not keep the machine at temperatures below 0°C/32°F. Water left in the heating system may freeze and cause damage.
- Do not leave water in the water tank when you are not going to use the machine for a long period of time. The water can become contaminated. Use fresh water every time you use the machine.
- Never use any accessories or parts from other manufacturers or that Gaggia does not specifically recommend. If you use such accessories or parts, your warranty becomes invalid.
- Regular cleaning and maintenance prolongs the lifetime of your machine and ensures optimum quality and taste of your coffee.
- The machine is exposed continuously to moisture, coffee and scale. Therefore it is very important to regularly clean and maintain the machine as described in the user manual and shown on the website. If you do not perform these cleaning and maintenance procedures, your machine eventually may stop working. In this case repair is not covered by warranty.
- Do not clean the brew group in the dishwasher and do not use washing-up liquid or a cleaning agent to clean it. This may cause the brew group to malfunction and may have a negative effect on the coffee taste.
- Do not dry the brew group with a cloth to prevent fibers from collecting inside the brew group.
- Never drink the solution dispensed during the descaling process.
- Only put preground coffee into the preground coffee compartment. Other substances and objects may cause severe damage to the machine. In this case, repair is not covered by your warranty.
- The machine shall not be placed in a cabinet when in use.

Machines with milk carafe

Warning

- To avoid the danger of burns, be aware that dispensing may be preceded by jets of milk and steam. Wait until the end of the cycle before you remove the milk carafe.
Caution

- Make sure that the milk carafe is installed and the milk dispensing spout is open before you select a milk-based coffee beverage or milk froth.
- Do not put any other liquids in the milk jug/carafe than water (for cleaning) or milk.
- Do not clean the milk carafe in the dishwasher.

Machines with classic milk frother / pannarello

Warning

- To avoid the danger of burns, be aware that dispensing may be preceded by small jets of hot water.
- Never touch the classic milk frother with bare hands, as it may become very hot. Use the appropriate protective handle only.

Caution

- After frothing milk, quickly clean the classic milk frother by dispensing a small quantity of hot water into a container. Then remove the external part of the classic milk frother and wash it with lukewarm water.

Machines with automatic milk frother / cappucinatore / Capp in Cup system

Warning

- To avoid the danger of burns, be aware that dispensing steam or hot water may be preceded by small jets of hot water. Never touch the hot water/steam dispensing spout with bare hands, as it may become very hot. Use the appropriate protective handle only.
- During dispensing make sure that the spout of the “Capp in Cup” system, if present, is oriented towards the cup and not towards yourself.
- Never drink the solution dispensed during the monthly cleaning procedure of the automatic milk frother.

Caution

- For hygienic reasons, make sure that the outer surface of the hot water/steam dispensing spout is clean.
- After frothing milk, quickly clean the automatic milk frother by dispensing a small quantity of hot water. Follow the cleaning instructions in the user manual.
- Be careful, the hot water/steam dispensing spout could be hot if the machine has recently been used.
- Do not push the rubber fitting too far on the hot water/steam dispensing spout when you insert it. In this case, the automatic milk frother would not work correctly as it would not be able to suck up milk.
Electromagnetic fields (EMF)

This machine complies with all applicable standards and regulations regarding exposure to electromagnetic fields.

Recycling

- This symbol means that this product shall not be disposed of with normal household waste (2012/19/EU).
- Follow your country's rules for the separate collection of electrical and electronic products. Correct disposal helps prevent negative consequences for the environment and human health.

Warranty and support

For service or support, contact your local dealer or an authorized service center. Contact details are included in the warranty booklet supplied separately or visit www.gaggia.com or www.gaggia.it.
Congratulations on your purchase of Gaggia Magenta Milk!
This easy-to-use machine guarantees excellent results every day.
Thanks to the intuitive interface, you can choose among 9 beverages and
customise them according to your preferences.
Before being packed, each of our high-quality machines undergoes rigorous testing
in our laboratories in order to ensure its correct operation. Some coffee residue
might be found in your machine, since real coffee is normally used during testing.
However, this does not compromise the integrity of the product. Please be assured
that this is a brand new machine.
In this user manual you will find all the information you need to install, use, clean
and descale your machine. Before using it for the first time, please read carefully
the safety manual provided separately and store it for future use.

Control panel and display

Control panel overview (Fig. 1)

1/2 MULTIFUNCTION buttons
Select the function shown on the display.

3 ON/OFF button
To switch the machine on or off, by keeping the button pressed for a few seconds.

4 HOME button
To open the beverage menu.

5 CLEAN/SET button
To open the cleaning and settings menu.

6 START/STOP button
To start/stop the dispensing of the selected beverage, or to start/stop the procedure indicated on the display.

Note: HOME and CLEAN/SET also work as ESC buttons. You can exit the screen by pressing one of the two buttons to go back to the main menu. This will not be possible if you have already accessed a function or a programme.

Multifunction buttons
The multifunction buttons on the sides of the display are used to select the function or the beverage to which they refer at that time.

Note: To make the reading of this manual easier, <<press the " " button>> means <<press the button related to " ">>.
First installation

Before using the machine, it is essential to follow a few simple steps, clearly described in the explanatory drawings you found in the quick guide at the beginning of this instruction manual.

Note: for even tastier coffee, we recommend that you initially prepare 5 cups of coffee to allow the machine to self-adjust.

Manual rinse cycle

During the first installation or after a long period of machine inactivity, a manual rinse cycle must be carried out.

1. Place a container under the coffee dispensing spout, scroll through the different pages and select a “ESPRESSO LUNGO”.

2. Press the " button until " ” is selected, without adding pre-ground coffee.

3. Press the START/STOP button to start dispensing. The machine will dispense hot water.

4. Empty the container and remove the Capp in Cup system from the steam tube.

5. Place the container under the steam tube and select ” HOT WATER “.

6. Press the START/STOP button to start dispensing.

7. Empty the container and repeat steps 5 to 7 until the water tank is empty.

8. When finished, refill the water tank to the MAX level. The machine is now ready for use.
Measuring water hardness

You will need to set the water hardness when you install your machine. Take the water hardness measuring strip contained in the packaging and follow the steps shown on the display during the installation phase. To change the water hardness later, press the CLEAN/SET button, then select "SETTINGS", and once in the settings menu, please select "WATER HARDNESS".

1. Immerse the water hardness measuring strip in a glass of water for 1 second. Remove the strip from the water and wait 1 minute.
2. Note how many squares turn red.
3. Use the green “✓” and “✗” buttons to select the water hardness according to the table below. Confirm the setting by pressing “✓”.

<table>
<thead>

INTENZA+ water filter

We recommend using the INTENZA+ water filter to limit limescale formation. This ensures a longer operating life of your machine and a better coffee aroma over time.

Water is an essential element in brewing coffee. Therefore, it is extremely important that water is always filtered adequately.

The INTENZA+ water filter prevents the formation of mineral deposits, improving the quality of the water.
Installing the INTENZA+ water filter

Immerse the INTENZA+ water filter in cold water, in a vertical position and with the opening facing upwards. Press both sides of the filter gently to let air bubbles out.

Remove the INTENZA+ water filter from the water. Set the machine according to the detected water hardness - see the "Measuring water hardness" chapter. On the filter base, please set one of the following:

A = soft water – 1 or 2 small squares
B = hard water (standard) – 3 small squares
C = very hard water – 4 small squares

Place the INTENZA+ filter in the water tank, ensuring it is correctly positioned. Refill the water tank and place it back in its housing.

1. Press the CLEAN/SET button and then the " SETTINGS " button.
2. Select " WATER FILTER " and press the " ✓ " button.
3. Select " ACTIVATE " and follow the instructions on the display to activate the filter correctly.

Note: you can pause the filter activation procedure by pressing the START/STOP button. To resume the filter activation procedure, press the START/STOP button again.

Replacing the INTENZA+ water filter

When the INTENZA+ water filter expires, the warning message appears on the display.

1. Replacement or deactivation can be executed by pressing the CLEAN/SET button and then the " SETTINGS " button.
2. Select " WATER FILTER " then press the " ✓ " button.
3. Select " REPLACE " to change the filter or " DISABLE " if you do not intend to use the filter. Confirm with the " ✓ " button.

Follow the instructions shown on the display to activate the filter.
Types of beverage

<table>
<thead>
<tr>
<th>Original recipe</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ristretto</td>
<td>A ristretto, served in a small cup, is an espresso whose brewing time is shorter than a regular espresso. This results in a coffee that is shorter and less in rich in caffeine.</td>
</tr>
<tr>
<td>Espresso</td>
<td>The espresso is known around the globe as true Italian coffee. Served in a small cup, its unmistakeable features are a full and intense aroma and a top layer of compact, natural “crema”. It is the result of the pressurized hot water extraction process invented by Achille Gaggia in 1938.</td>
</tr>
<tr>
<td>Espresso lungo</td>
<td>The long espresso is an espresso with a longer extraction time. It is more diluted, with a different aromatic intensity and a higher caffeine content. It is served in a medium-sized cup.</td>
</tr>
<tr>
<td>Coffee</td>
<td>Coffee is a beverage prepared with more water than espresso. It has a lighter aroma and is served in a medium-large cup.</td>
</tr>
<tr>
<td>Americano</td>
<td>Americano is a less intense long coffee, prepared with an espresso to which hot water is added.</td>
</tr>
<tr>
<td>Cappuccino</td>
<td>The cappuccino is an Italian classic, among the most loved in the world. It is prepared with espresso, milk and a milk froth, which must be no less than 1 cm thick. It is served in a large cup.</td>
</tr>
<tr>
<td>Café au lait</td>
<td>A café au lait is a beverage composed of equal parts coffee and milk. This can even be enriched by a thin layer of milk froth. It is served in a large cup.</td>
</tr>
<tr>
<td>Frothed milk</td>
<td>Frothed milk is used to make cappuccinos, latte macchiatos and several other beverages. The result is a compact, homogeneous layer of milk froth.</td>
</tr>
<tr>
<td>Hot water</td>
<td>Hot water can be used to prepare hot teas, infusions and instant beverages.</td>
</tr>
</tbody>
</table>

Note: In the original recipes the beverages are all set to an average temperature and aroma intensity.
Espresso tray

This machine was designed to guarantee flawless results, from a traditional espresso to a number of different beverages. If you want to enjoy an Italian espresso with a delicious layer of its natural "crema" on top and as tradition dictates, we suggest your using of the "Espresso Tray" which is specifically designed for this purpose. This tray allows the use of traditional espresso cups, ensuring the perfect height for a compact, homogeneous "crema" and a splash-free brewing.

Lift the espresso tray off the grid of the drip tray and place it into the dedicated slot as shown in the drawing.

Coffee Brewing

Brewing coffee using coffee beans

**Warning:** only use coffee beans when making espresso. Do not put any pre-ground, unroasted, freeze-dried or instant coffee in the coffee bean container, as they may damage the machine.

**Tip:** Preheat the cups with hot water to enjoy a warmer coffee.

1. Upon positioning the espresso tray, place a cup under the coffee dispensing spout, raise or lower the coffee dispensing spout according to the size of the cup you are using.
   Press the **HOME** button to access the beverage menu.

2. Browse the various pages to find and select the desired coffee.

3. Upon selection of your desired coffee, it is possible to prepare two cups at the same time—besides AMERICANO, using the " button.
4 Finally, press the START/STOP button to start brewing.

**Note:** you can interrupt the brewing at any time by pressing the START/STOP button.

If you wish to customise the settings of a specific beverage, please refer to the “Beverage customisation” chapter.

---

**Brewing coffee using pre-ground coffee**

Use the measuring scoop provided to insert the correct dose in the pre-ground coffee compartment.

1 Lift the lid of the pre-ground coffee compartment and add a little less than one level scoop of pre-ground coffee.

**Warning:** do not insert anything other than pre-ground coffee, as it may damage the machine.

2 Place a cup under the coffee dispensing spout and select the desired beverage.

3 Press the "(*)" button until "(*)" is selected.

**Note:** The "pre-ground coffee" function excludes the possibility of brewing two cups of coffee at the same time, as well as the aroma setting. In fact, these are only possible with coffee beans.

4 Press the START/STOP button to start brewing the coffee.

If you wish to customise the settings of a specific beverage, please refer to the “Beverage customisation” chapter.

**Note:** you can interrupt the brewing at any time by pressing the START/STOP button.
Preparation of coffee-based beverages and frothed milk

How to assemble the Capp in Cup system

**Note:** Before preparing any milk-based beverage, make sure that the Capp in Cup system is fitted properly on the machine.

1. Fit the spout on the main body of the Capp in Cup system.

2. Insert the Capp in Cup system into the rubber grip on the steam tube until it locks into place.

Brewing coffee-based and frothed milk beverages

**Tip:** use only cold milk at a temperature of 5 °C approx. and with at least a 3% protein content so as to obtain a perfect milk froth. You can use either whole milk or semi-skimmed milk. Also, you can use skimmed, soy or lactose-free milk.

1. Lift the carafe lid and pour the milk into the carafe: the milk must reach a level between the minimum (MIN) and the maximum (MAX) level marks available on the carafe.

2. Insert the suction tube of the main body of the Capp in Cup system into the milk carafe until it reaches the carafe bottom.
3 Place a cup or a glass under the Coffee dispensing spout and the Capp in Cup system.

4 Press the HOME button and choose the desired beverage from the menu.
   - Press the button corresponding to the desired beverage.
   - Press the START/STOP button to start dispensing the selected beverage.

5 The machine dispenses a default amount of coffee and frothed milk into the cup or the glass. Depending on the beverage chosen, either coffee or frothed milk will be dispensed first.

If you wish to customise the settings of a specific beverage, please refer to the "Beverage customisation" chapter.

6 After dispensing your coffee-based and frothed milk beverages, it is best to complete the quick cleaning procedure of the milk circuit within 10 seconds. However, the procedure can also be carried out later by accessing the cleaning menu via the CLEAN/SET button. Press the "CLEAN" button and select the "QUICK CLEAN" option. Then press the "✓" button. Then, follow the instructions shown on the display.

**Note:** We suggest that you carry out a quick clean at least once a day and that you rinse the Capp in Cup system Spout under running water.

Press the START/STOP button to confirm, or to carry out the procedure later.

### Dispensing hot water

**Warning:** when preparation starts, the steam tube may spray steam and hot water.

1 Remove the Capp in Cup system and place a container under the steam tube.

2 Press the HOME button, browse the various screens using the green button, and select hot water.
3 Press the "HOT WATER" button. Finally, press the START/STOP button to commence dispensing.

Note: you can interrupt dispensing at any time by pressing the START/STOP button.

If you wish to customise the settings of a specific beverage, please refer to the "Beverage Customisation" chapter.

Customising beverages and saving settings (MEMO)

This machine allows you to change the settings of a beverage according to your preferences and save them (MEMO), by overwriting the previous settings.

Beverage Customisation

1 Press the HOME button.

2 Select your beverage.

3 All the settings that can be adjusted and/or selected are displayed on the screen. Based on the type of beverage, you can adjust and/or select:
   - coffee and milk amount;
   - coffee temperature;
   - brewing two cups at a time;
   - pre-ground coffee use;
   - aroma intensity (only when using coffee beans);

4 Once the " COFFEE " or " MILK " button has been pressed, use the green " " and " " buttons to select the desired amount. Press " " to confirm and return to the previous screen, where the new quantity will be displayed.

5 Press the " TEMP " button repeatedly to adjust the temperature of the beverage among the following options:
   - low;
   - medium;
   - high;

6 Press " " button to brew two cups, or " " for a single cup. The picture of the beverage in the centre of the display will indicate the number of cups selected.

Note: this function is not available for beverages with milk, AMERICANO and HOT WATER.
8 To change the intensity of the aroma or select the pre-ground, press the " [b] " button. You can choose among 5 different degrees of intensity. Every time you press the " [b] " button, the aroma strength changes by one degree. The display shows the selected intensity or the selection of the pre-ground.

1 Very light
2 Light
3 Normal
4 Strong
5 Very strong
6 Pre-ground.

**Note**: the function Pre-ground allows the brewing of just one coffee at a time.

9 Once the beverage has been customised according to your preferences, you can proceed with dispensing it by pressing START/STOP button.

10 If you have changed any of the parameters listed above, you will be asked at the end of dispensing if you would like to save the recipe with the changes made.

**Note**: the new saved settings will overwrite those of the previous recipe.

**Note**: to return to the factory settings of the single recipes, you must re-enter and save the settings indicated in the "Beverage type" section.

---

**Coffee grind settings**

You can adjust the grind setting using the grinder adjustment knob on the coffee bean container. The ceramic coffee grinder guarantees a perfect and homogeneous grinding for the preparation of every cup of coffee. The aroma is thus preserved, ensuring the perfect flavour every time.

**Note**: you can only adjust the grind setting while the machine is grinding the coffee beans. The difference in taste will be perceived after brewing 2-3 cups of coffee.

**Warning**: to avoid damaging the coffee grinder, do not rotate the grinder adjustment knob more than one notch at a time.

1 Place a cup under the coffee dispensing spout.
2 Open the lid of the coffee bean container.
3 Prepare an espresso as described in the chapter “Brewing coffee with coffee beans”.
4 While the machine is grinding coffee, press the grind settings adjustment knob in the bean container and turn it one notch at a time, to the left or right. Use the grinder adjustment key. The reference marks in the coffee bean hopper compartment indicate the grinding setting.
Cleaning and maintenance

Regular cleaning and maintenance keep the machine in perfect condition and ensure perfect coffee flavour, a constant coffee flow and an excellent milk froth. Please refer to the following table to know when and how to clean the removable parts of the machine. Please read the specific chapter for further information.

Cleaning table

Cleaning the Capp in Cup system

Capp in Cup system Cleaning Programmes

The machine allows two cleaning programmes for the Capp in Cup system: quick and deep clean. Both programmes can be selected with the CLEAN/SET button. Press the “CLEANING” button upon selection. Quick clean is also recommended after dispensing a milk-based beverage. For both programmes, follow the instructions shown on the display.

- Quick clean programme
  The quick clean programme includes the milk circuit cleaning with hot water.
- Deep clean programme
  The deep clean programme for the Capp in Cup system includes also the deep cleaning of the whole milk circuit by means of Philips “Milk Circuit Cleaner”.

- Quick clean programme
  The quick clean programme includes the milk circuit cleaning with hot water.
- Deep clean programme
  The deep clean programme for the Capp in Cup system includes also the deep cleaning of the whole milk circuit by means of Philips “Milk Circuit Cleaner”.

Cleaning of the Capp in Cup system under running water

**Warning**: the steam tube may be hot after use.

1. Remove the Capp in Cup system from the steam tube (Fig. 23).
2. Remove the rubber handle from the steam tube. (Fig. 24).
3. Remove the Capp in Cup system spout (Fig. 25).
4. Remove the milk suction tube from the main body of the Capp in Cup system (Fig. 26).
5. To disassemble the main body:
   - hold it tight from the sides as shown (Fig. 27);
   - pull and extract the left part as shown in figure (Fig. 28);
6. Remove the rubber lid (Fig. 29).
7. Disassemble the glass milk carafe (Fig. 30).
8. Wash all components under running water.
9. After cleaning, reassemble all the components by following the same procedure in reverse order.

Cleaning the brew group

**Warning**: do not wash the brew group in the dishwasher and do not use dishwashing detergents, since they may cause the malfunctioning of the brew group and alter the coffee flavour.

Removing the brew group

1. Turn off the machine and disconnect the power cord.
2. Remove the drip tray and the coffee pucks container.
3. Open the service door.
4. Press the PUSH lever (1) and pull the handle of the brew group (2) to remove it from the machine.
Cleaning the brew group under running water

1 Clean the coffee outlet duct thoroughly with a spoon handle or with another round-tipped kitchen utensil.

2 Rinse the brew group and the coffee residues drawer thoroughly with lukewarm water. Carefully wash the upper filter.

3 Let the brew group air dry.

Note: to avoid the build-up of fibres in its interior, do not dry the brew group with cloth.

Reinserting the brew group

1 Before placing the brew group back into the machine, make sure that the two yellow reference marks on the side match. If this is not the case, perform the following step.

Make sure that the lever is in contact with the base of the brew group.

5 Remove the coffee residues drawer.
2 Make sure that the yellow locking hook of the brew group is in the right position.

To position the hook correctly, push it upwards to the highest possible position.

If the hook is still in the lower position, it means that it is not positioned correctly.

3 Reinsert the coffee residues drawer.

4 Reinsert the brew group into the machine along the side guides until it locks in the right position with a click.

**Warning**: do not press the PUSH lever.

5 Close the service door.

---

**Cleaning the brew group with cleaning tablets for the removal of oily coffee residues**

**Warning**: use only Gaggia cleaning tablets to remove oily coffee residues.

1 Place a container under the coffee dispensing spout.

2 Press the CLEAN/SET button and select the "CLEAN" button shown on the display.

3 Select "BREW GROUP CLEANING" and press the ” ✓ ” button, then press START/STOP button to start the cleaning procedure.

4 Follow the instructions shown on the display to clean the brew group correctly.

5 The procedure will take approximately 5 minutes. START/STOP button can be used to pause and resume the procedure.
Lubricating the brew group

In order to ensure the perfect performance of the machine, it is necessary to lubricate the brew group. Refer to the following table for the frequency of lubrication.

<table>
<thead>
<tr>
<th>Frequency of use</th>
<th>Number of beverages prepared daily</th>
<th>Lubrication frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low</td>
<td>1-5</td>
<td>Every 4 months</td>
</tr>
<tr>
<td>Regular</td>
<td>6-10</td>
<td>Every 2 months</td>
</tr>
<tr>
<td>High</td>
<td>&gt;10</td>
<td>Every month</td>
</tr>
</tbody>
</table>

1. Turn off the appliance and disconnect the power cord.
2. Remove the brew group and rinse it using lukewarm water - see the “Cleaning the brew group under running water” chapter.
3. Apply a thin layer of the lubricant provided around the insertion pin on the lower part of the brew group.

4. Apply a thin layer of lubricant to the guides, on both sides (see figure).
5. Reinsert the brew group - see the “Reinserting the brew group” chapter.

**Note:** you can use the lubricant tube multiple times.
Descaling

Descaling needs to be carried out when the machine requires it. Use only Gaggia descaling solution designed to guarantee the machine's excellent performance. The use of different products could damage the machine and leave residue in the water. Failure to descale the machine will void the warranty.

1. Remove the Capp in Cup system if fitted on the machine.
2. Press CLEAN/SET button and select the "CLEAN " button shown on the display.
   - Select "DESCALING " and after confirming with "✓" press the START/STOP button to start.
3. Remove the drip tray and the coffee pucks container, empty and place them all back into the machine.
4. Remove the water tank and empty it. Remove the INTENZA+ filter, if in place.
5. Pour the entire bottle of Gaggia descaling solution into the water tank and fill the tank with water up to the CALC CLEAN level. Reinsert it into the machine.
6. Place a large recipient (1.5l) under the steam tube and the coffee dispensing spout.
7. Follow the instructions shown on the display to launch the descaling procedure. This procedure lasts approximately 25 minutes and consists of a descaling cycle and a rinse cycle, carried out with dispensing at regular intervals.
8. Once the descaling cycle is complete, rinse the water circuit and tank by following the instructions shown on the display.
9. Position the INTENZA+ filter back into the water tank.

Note: it is possible to pause and resume the procedure at any time by pressing the START/STOP button.

Warning: when the descaling procedure is active, the brew group cannot be removed. Wait for the descaling process to end, then remove the brew group.
What to do if the descaling process is interrupted

You can exit the descaling procedure by keeping the ON/OFF button on the control panel, pressed for a few seconds. If the descaling procedure is interrupted before its completion, proceed as follows:

1. Empty the water tank and wash it thoroughly.
2. Fill the water tank with running water up to the CALC CLEAN level mark, then switch the machine back on. The machine will warm up and perform an automatic rinse cycle.
3. Before preparing any beverages, carry out a manual rinse cycle as described in the dedicated chapter.

*Note:* if the procedure has not been completed, it will be necessary to carry out another descaling procedure as soon as possible.

Other settings

By pressing the CLEAN/SET button and selecting “SETTINGS” on the display, you can reset or modify some of the machine parameters including:

- Language.
- Water filter.
- Stand-by Time.
- Units.
- Water hardness.
- Beverage counter.
- Button sound
- Factory settings.

Language

When the language setting icon is selected, the list of available languages will be displayed.

**Available languages**

<table>
<thead>
<tr>
<th>ITALIAN</th>

</tr>
</tbody>
</table>
Water filter
When "WATER FILTER" is selected, follow the instructions on the display and those described under the "Installing the INTENZA+ water filter" and "Replacing the INTENZA+ water filter" chapters.

Stand-by Time
When "STAND-BY TIME" is selected, the timer can be set to:
- 15 min
- 30 min
- 60 min
- 180 min

Units
By selecting "UNITS":
you can set the unit of measurement in "ml" or "oz".

Water hardness
With "WATER HARDNESS" selected, follow the instructions on the display and those described under the "Measuring water hardness" chapter.

Beverage counter
It is possible to display the number of cups of each beverage that have been dispensed since the first operation of the machine. These data cannot be reset.

Button sound
You can turn the button sound off by selecting "OFF" so as not to be disturbed.

Factory settings
You can reset the machine to factory default values. The machine will require a double confirmation before proceeding.
# Error code key

The list below reports the error codes that the display can show, their meanings and how to solve the problem. If the indicated solutions are ineffective because the display continues to show the error code icon and the machine does not return to normal operation, or if other error codes are displayed, you must contact an authorized service center or distributors in your country. The contact info is listed on www.gaggia.com and www.gaggia.it.
